

BLACKBOARD- Adaptive Release

Faculty can control the release of content items to their students on a rule or set of rules they create. They can control what content is available to which students. And under what conditions, the students are allowed to see it.

CONTENT ITEMS

Content Items are anything ranging from:

- Item or File
- Audio, Image, Video or Web Link
- Assessment Items – Tests, Survey's and Assignments

TYPES OF ADAPTIVE RELEASE

There are two types of Adaptive Release – Basic & Advanced

BASIC ADAPTIVE RELEASE

- Add one rule for a single piece of content
- And inside of that rule, it can have multiple criteria

ADVANCED ADAPTIVE RELEASE

- Can add multiple rules to a single piece of content
- The content is visible to a student if any of the rules are met
- Inside each of those rules, you can have multiple criteria

RULE CRITERIA

Rules can be based on...

- Criteria related to Date & Time
- Individual Names &/or Groups (*example, if you had content information that you'd like to share with Group 2 that is working a certain topic, you can post that and Adaptive Release it to only go to Group 2.*)
- Review Status of another item in the course (*if students have done the reading that you assigned under lesson plan 1, then they are able to go on and see and do the quiz.*)
- Assessment Scores or Attempts (*so if the student successfully completes quiz number 1 and they obtained a mark of 60% or higher, quiz 2 or extra information may then show for them so they can continue on in the course.*)
